

21 April 2011  
Hello Everyone,

We've had a few queries about the TrackIt system so have created the following email with answers to the main questions we've had; including how to purchase the required parts. Note that full background info about TrackIt can be found at [www.trackit.co.nz](http://www.trackit.co.nz); also feel free to call us if you have any further queries.

Note: If you are time poor & just want to get everything done quickly then the easiest option is to send us an email (with your full name, phone number, physical address & email address + whether your car has an external antennae) requesting an invoice. From this we'll set up an account for you + notify your nearest installer to contact you to organise installation. Another easy option is to purchase online at <http://www.trackit.co.nz/shop/>

### **What the race system does**

Car info: The system provides all race results + the position & speed of every car in a very accurate & easy to access format.

This info is viewable from any device (e.g. phone, laptop) anywhere & in live time, with both map & report style.

It can viewed by multiple people at the same time & refreshes every 10 seconds.

Safety: The devices will provide added safety for the event by monitoring vehicle behavior and alerting officials when strange things happen.

For example; an alert is automatically generated if a vehicle leaves the road or stops during a stage.

This allows race officials react appropriately e.g. to notify drivers following the stopped or crashed car etc.

### **The tracking device**

As a special deal for Targa competitors the units can be purchased for only \$295 (incl GST) normally \$495.

You can either purchase this online at <http://www.trackit.co.nz/shop/> or you can request an invoice from us & pay by all other methods. Devices can be financed via standard plans with our [accredited](#) installers if desired.

### **Installation**

TrackIt has a chain of accredited installers rights throughout the country.

For details please visit the following page: <http://www.trackit.co.nz/installers.aspx>

Installation is likely to range from \$60-150 depending on the vehicle, and whether you already have an external antenna.

Full installation instructions will be provided with the device, so you can install the device yourself if desired.

Any experienced car stereo/alarm installer should have no difficulty.

### **Data**

In addition to the device cost, there is also a monthly cellular data fee of \$25/month (incl GST); minimum 2 months (covers testing in May, event in June).

If you pay by credit card for the tracking device then this will automatically be billed from your credit card on a monthly basis.

Alternatively you can request an invoice for 2 months data from us & pay by all other methods, or an AP form if you wish to have the service ongoing.

#### Notes

This is required to allow the Targa team to monitor all the cars, provide results etc.

It also gives you & your team 24/7 full access to all your car's info.

If you do not wish to track your vehicle after the Targa Rotorua event then simply let us know and we will switch off your data subscription.

Note that you may wish to continue for car security reasons **and** for other race events & practice sessions.

#### Antenna

In addition to the TrackIt unit, an external antenna is required.

If you don't have an existing external antenna then we have a shark fin style antenna available for \$40 (incl GST).

You can either purchase this online at <http://www.trackit.co.nz/shop/> or request an invoice from us & pay by all other methods.

We are very excited to be involved with Targa and look forward to seeing you on event.

Rob Rogers
